Career Objective

Results-driven Full-Stack Developer with hands-on experience architecting scalable web applications, secure REST APIs, and real-time systems using React.js, Spring Boot, and FastAPI. Possesses a strong foundation in database design, Linux environments, and system architecture. Eager to leverage backend expertise and analytical skills to build robust, high-performance solutions in enterprise environments.

Education

B.Tech in Computer Science and Engineering

REVA University, Bengaluru

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Web Technologies

CGPA: 8.6

2023—2027

Pre-University Education

Sankalp Independent PU College, Basavakalyan

90.5%

2021—2023

Skills

- **Programming Languages:** Java, JavaScript, Python, SQL
- **Frontend Development:** React.js, HTML5, CSS3
- **Backend & Networking:** Spring Boot, FastAPI, RESTful APIs, WebSockets, TCP/IP, UDP
- **Databases:** MySQL, PostgreSQL
- **Tools & Environments:** Git, Docker, Linux, Postman, VS Code

Projects

VigilAI MedLink v2.0 — Healthcare Triage System

GitHub Repo

Tech: Spring Boot, FastAPI, PostgreSQL, XGBoost, Docker, WebSockets

- Architected a full-stack, real-time healthcare triage platform optimizing clinic-to-hospital data routing.
- Implemented secure JWT-based authentication and full-duplex WebSocket communication for instantaneous updates.
- Integrated an XGBoost machine learning model in the backend to automate patient risk stratification.
- Engineered relational database schemas in PostgreSQL to handle high-concurrency transactional health records.

NetWatch — Real-Time Network & Server Monitoring Dashboard

GitHub Repo

Tech: Java, Spring Boot, React.js, PostgreSQL, WebSocket, Python, Linux, Docker

- Developed a real-time server monitoring platform that collects CPU, memory, disk, network, and uptime metrics from Linux systems.
- Built REST APIs using Spring Boot to process and store monitoring data in PostgreSQL.
- Implemented WebSocket-based real-time updates for a React dashboard with server status, performance charts, and threshold-based alerts.
- Containerized the application using Docker and Docker Compose and implemented API-key authentication for monitoring agents.

Employee Management System

GitHub Repo

Tech: React.js, Spring Boot, PostgreSQL, Axios

- Built a responsive CRUD system decoupling a React.js client interface from a Java Spring Boot backend engine.
- Developed clean REST endpoints with robust exception handling and comprehensive structural database mappings.

Certifications

- Oracle Databases for Developers Foundations — Oracle
- Introduction to Cloud Computing — Infosys Springboard
- ReactJS for Beginners — Simplilearn
- Responsive Web Design — freeCodeCamp

Achievements

- Winner — Datathon 2025, REVA University
